# Digital Scholarship Planning 2020 Webinar Series

[Home](#) / [Events](#) / [CNI Workshops](#) / Digital Scholarship Planning 2020 Webinar Series

## Description

In this webinar series, participants will learn about models and best practices related to planning and support for digital scholarship. The webinar series is designed both for those in the beginning of a planning process and for those from institutions seeking to take their program, services, and expertise to the next level. The focus will be on programs administered or jointly administered by the institution's library. The series will utilize a broad conception of digital scholarship, encompassing support for the humanities, arts, social sciences, and sciences. CNI's Associate Executive Director *Emerita*, [Joan Lippincott](#), will host and moderate each session. Additional resources including links to suggested resources and brief campus discussion guides will be provided.

This series builds on the work that CNI and its member institutions have done around the theme of digital scholarship planning. CNI has co-hosted and co-planned 4 workshops on this theme, issued a number of reports, published articles, and hosted project briefings at in-person and virtual membership meetings.

## Schedule and Topics

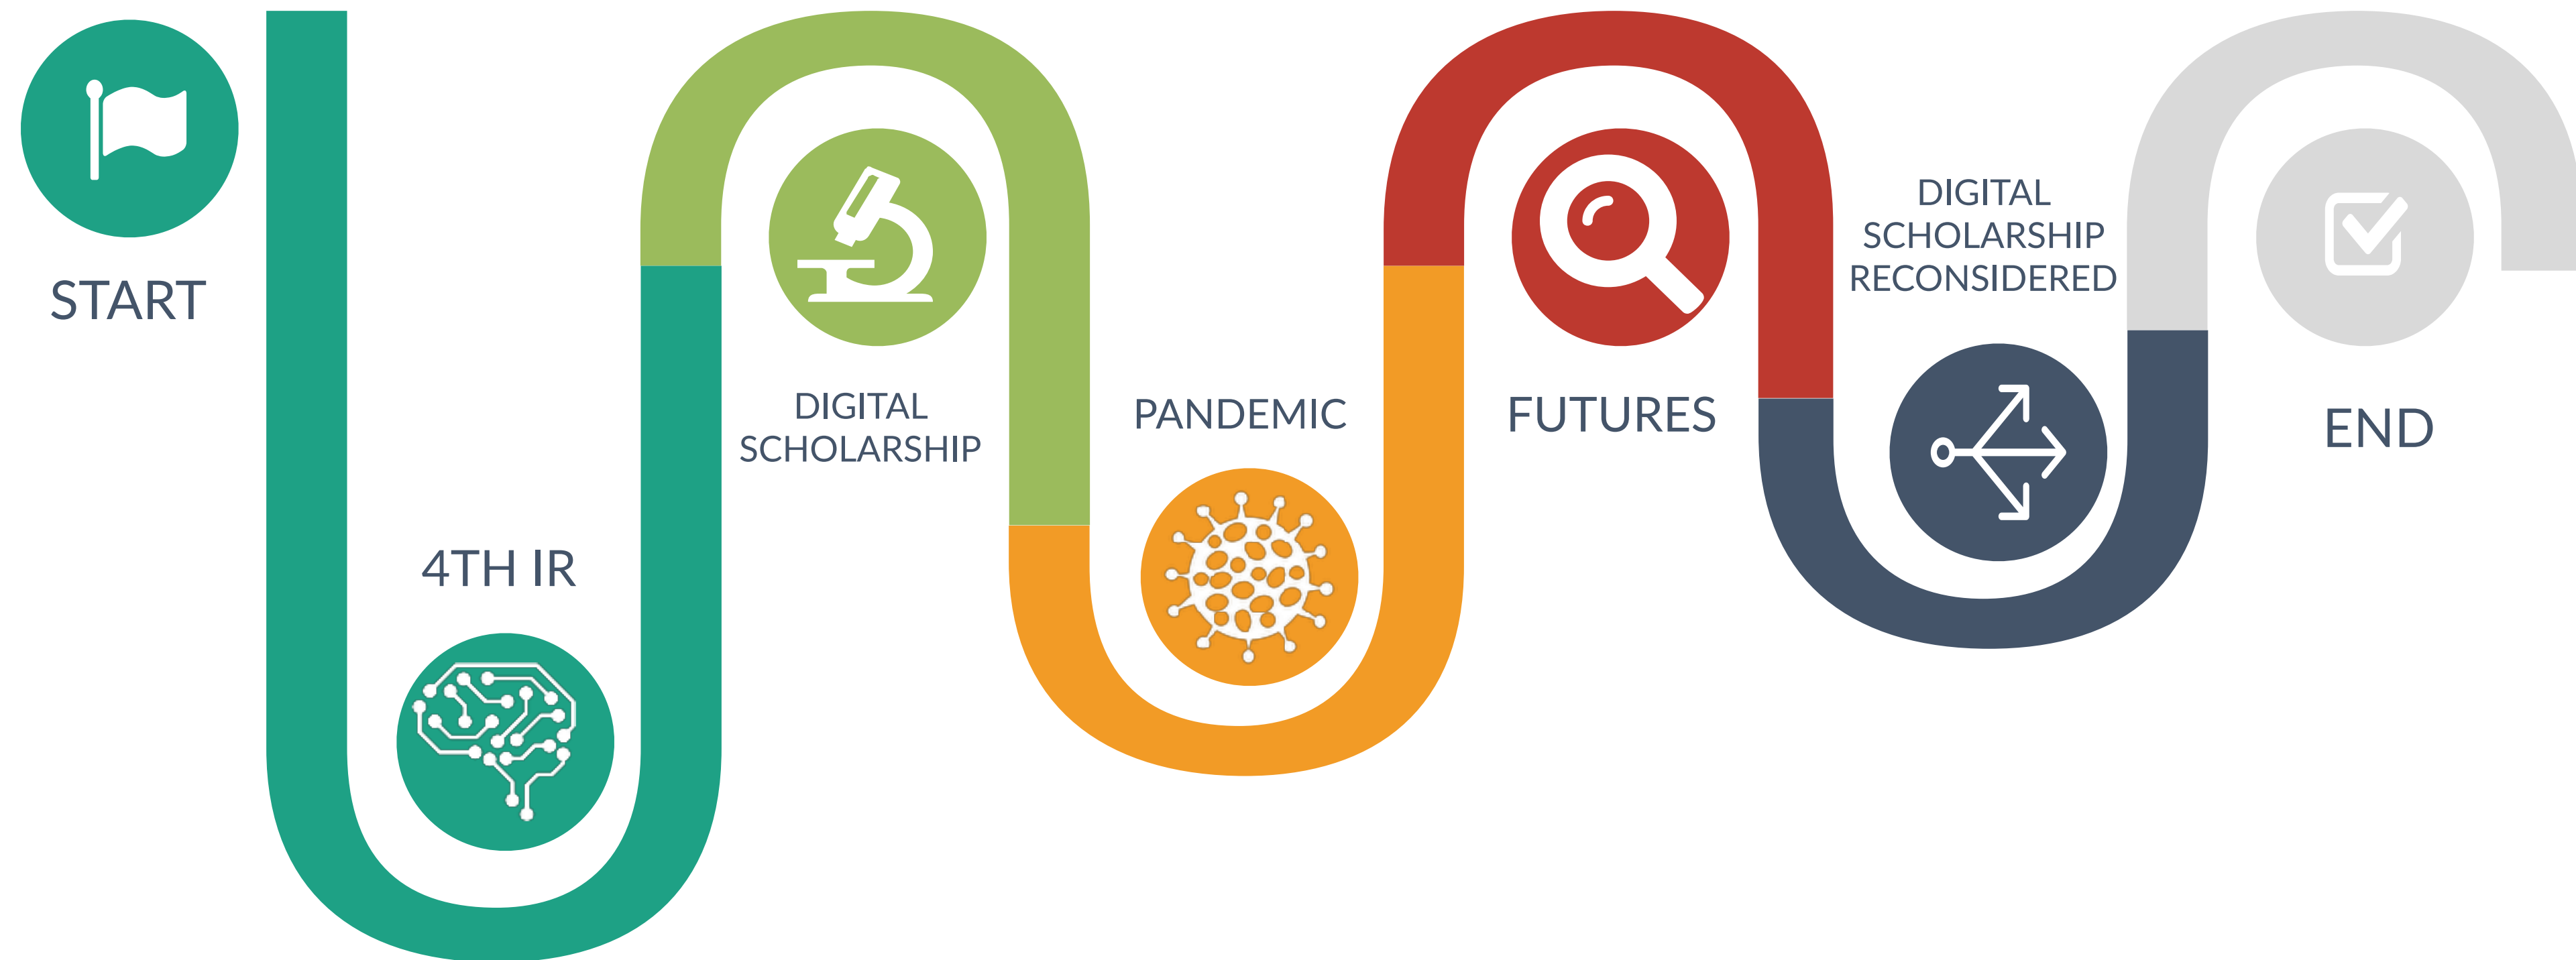

All sessions will be one hour from 1:00 – 2:00 PM Eastern Time.

- Thursday, September 10: [The Case for Developing Digital Scholarship Programs](#)
- Tuesday, September 15: [Supporting Digital Scholarship During the Pandemic: What's Possible](#)
- Thursday, September 17: [Assessment: Needs and Ongoing](#)
- Tuesday, September 22: [Staffing](#)
- Thursday, September 24: [Supporting Research](#)
- Tuesday, September 29: [Initiatives in Teaching & Learning](#)
- Thursday, October 1: [Diversity, Equity, & Inclusion](#)
- Tuesday, October 6: [Space and Place](#)
- *Note: No webinar on Thursday, October 8*
- Tuesday, October 13: [Reflections on Libraries and Digital Scholarship and Looking Ahead](#)

# Road Map

The future of libraries and the role of the evolving scholarly record

# tl;dl

- Digital scholarship can be deeply engaged in the technologies of the fourth industrial revolution
- Resourcing is a challenge, as much to date has relied on project funding
- COVID-19 has prompted a reset in organizations that might be extended to digital scholarship - reprioritizing budgets and leveraging growth of technology adoption
- We need to engage with the future as the worlds we envisage and actions we take now will shape how we emerge
- How does digital scholarship emerge from COVID-19 - how do we enable sustainable services and programs?

# THE FOURTH INDUSTRIAL REVOLUTION

The last 10 years have been about building a world that is mobile-first. In the next 10 years, we will shift to a world that is AI-first.

~ Sundar Pichai

# The Industrial Revolutions

---

## PRE-INDUSTRIAL SOCIETY

1780s

Steam, mechanical production, railroads; leading to electricity, mass production, assembly lines

1870s

1960s

Electronics, computers, automated production

2010s

Artificial intelligence, big data, robotics; shifting to focus on sustainability and environment

# Artificial Intelligence: Impacts and Roles for Libraries

[Home](#) / [Project Briefing Pages](#) / [CNI Fall 2019 Project Briefings](#) / Artificial Intelligence: Impacts and Roles for Libraries

Keith Webster  
Dean, University Libraries  
Carnegie Mellon University

Jason Griffey  
Director of Strategic Initiatives  
National Information Standards Organization

Jason Griffey will present on the evolution of artificial intelligence (AI) and potential impacts on libraries, drawing upon his recent book on the topic. Keith Webster will present on the opportunities for libraries to support AI education and research, based on work at Carnegie Mellon, the most prolific AI research institution in the United States. He will also touch on opportunities afforded by AI to advance library priorities.

# DIGITAL SCHOLARSHIP CONSIDERED —

Digital scholarship is an incredibly awkward term that people have come up with to describe a complex group of developments. The phrase is really, at some basic level, nonsensical.

~ Clifford Lynch

TRUST

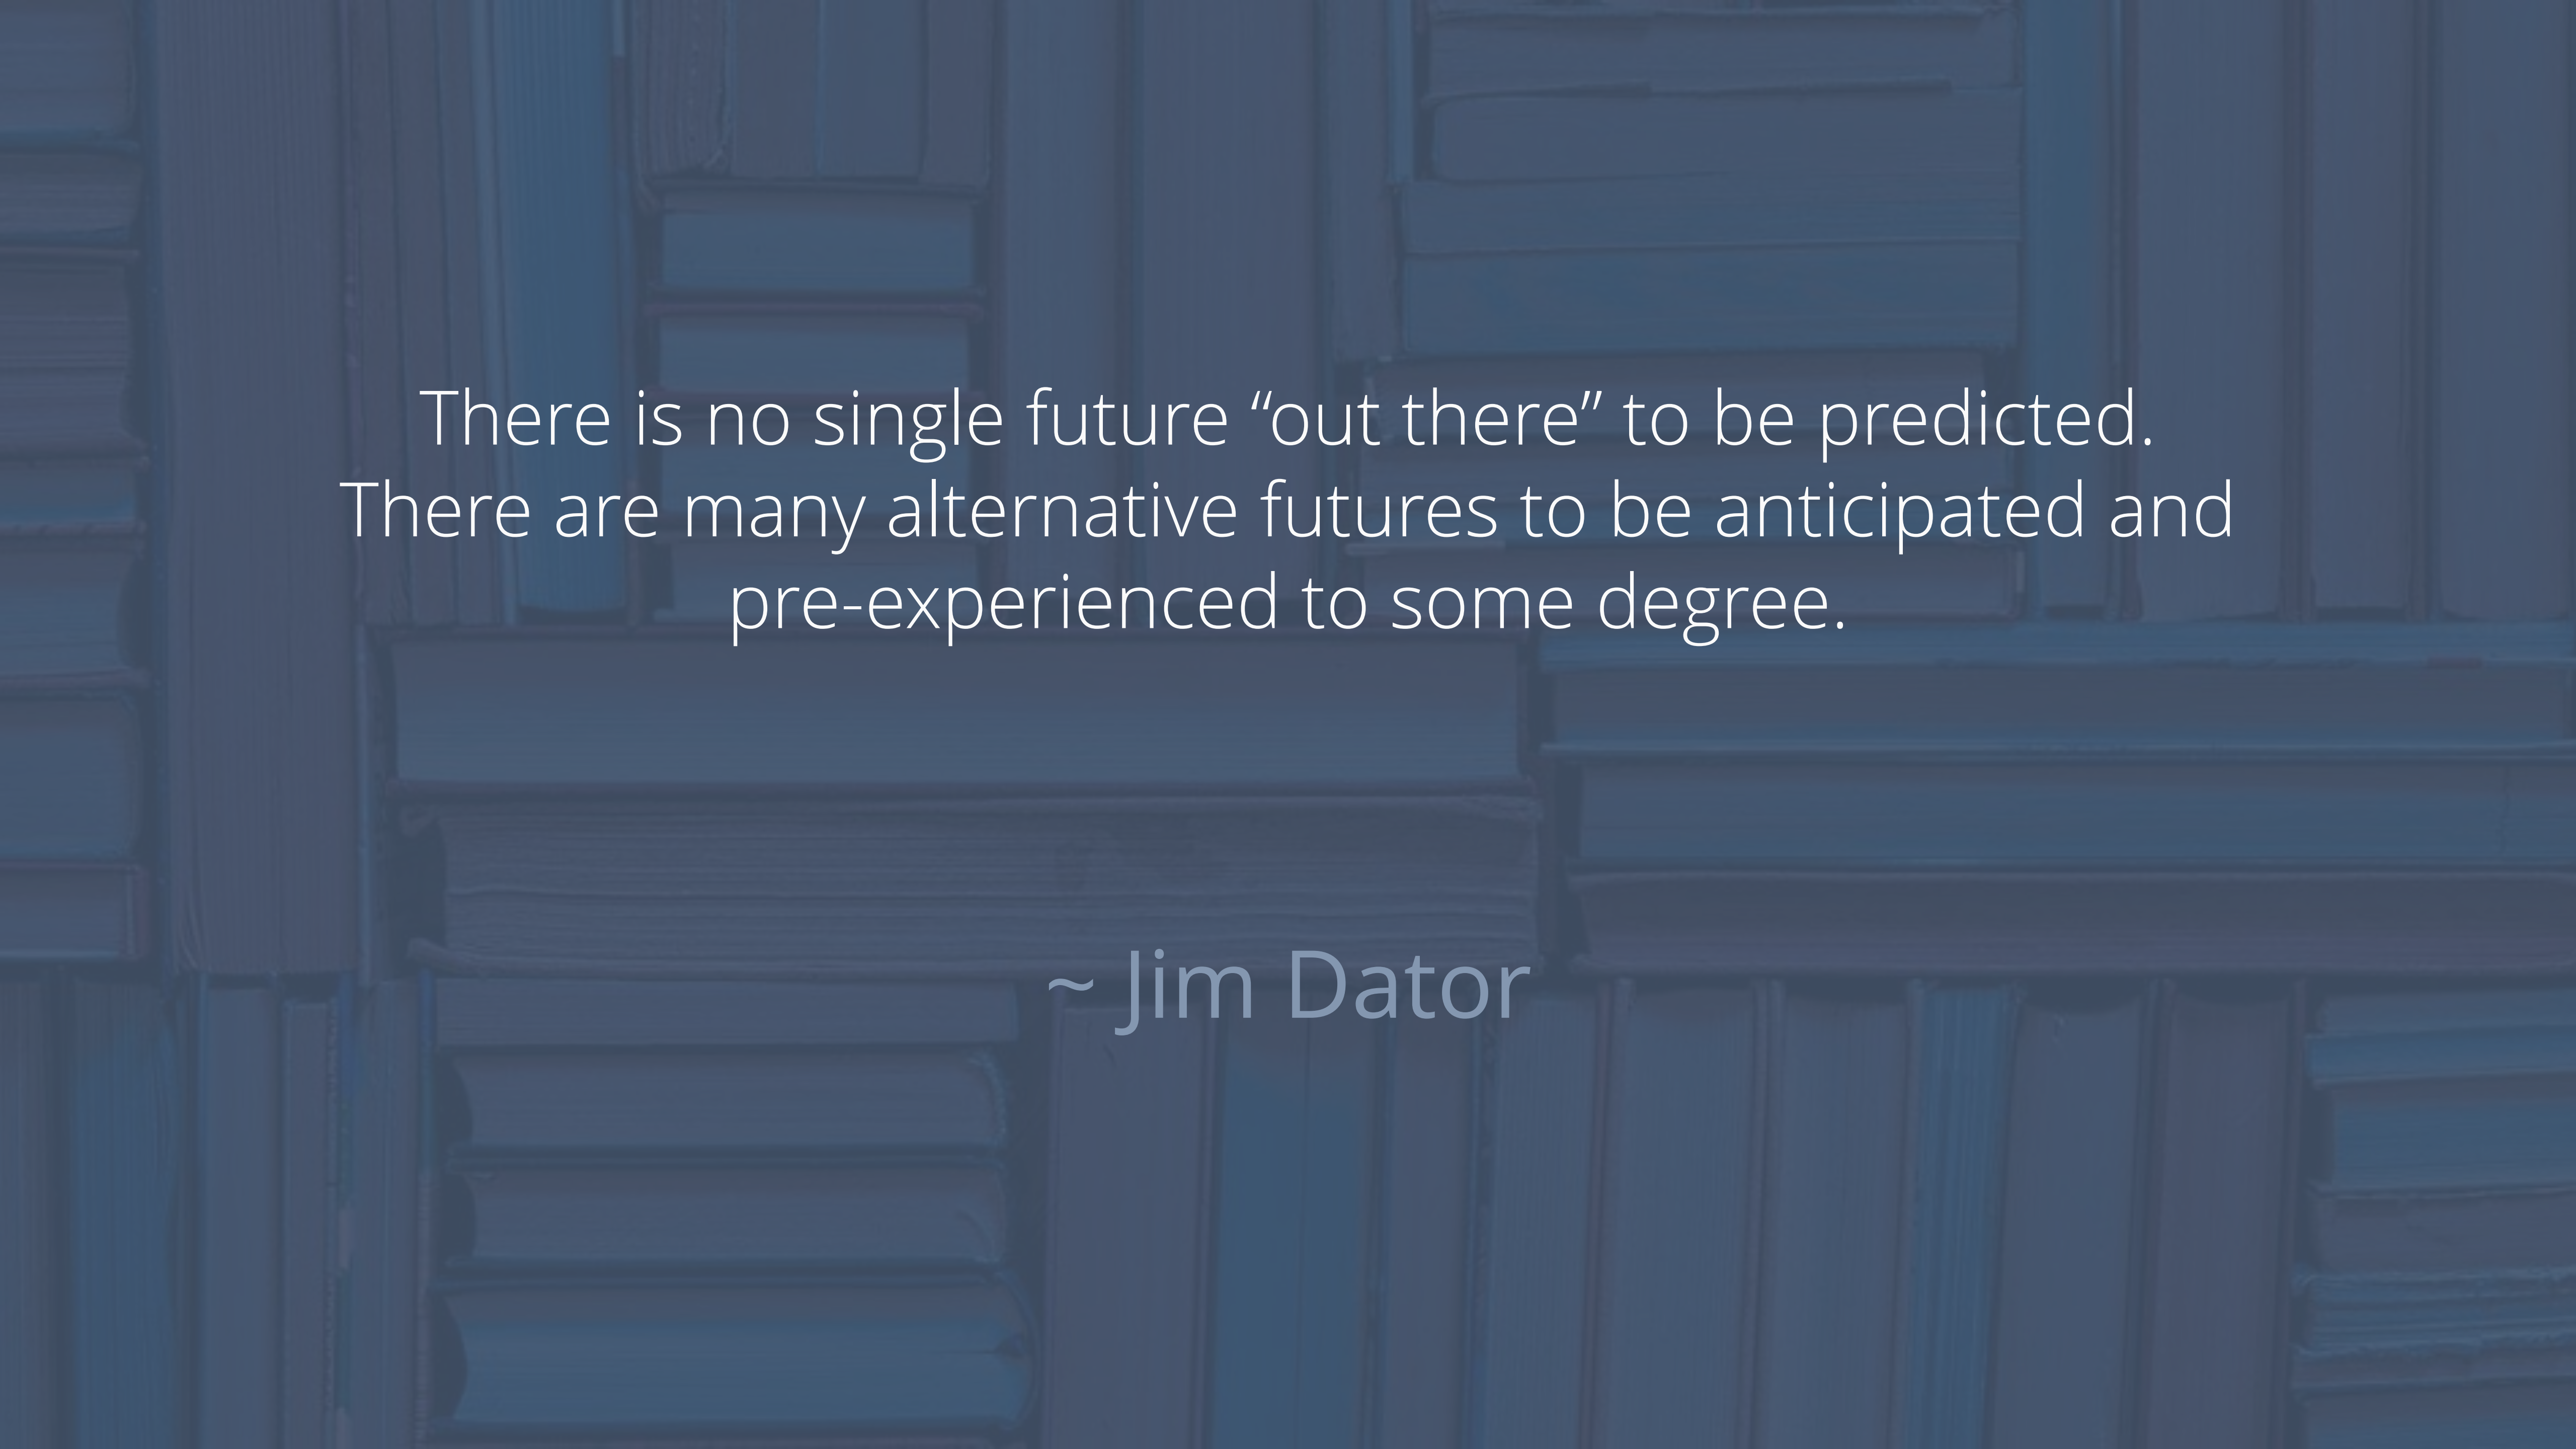

FUTURES

There is no single future “out there” to be predicted.  
There are many alternative futures to be anticipated and  
pre-experienced to some degree.

~ Jim Dator

## Prepare

Orient to the future  
Identify drivers of change  
Catalog signals of change

## Foresight

Draft a forecast  
Envision futures  
Headline the future

## Insight

Ride two curves  
Map cross-impacts  
Prioritize actions

## Action

Build a roadmap  
Rally a network  
Identify assets and gaps

PREPARE

# LOOK BACK TO LOOK FORWARD

Imagining a future that is very different from today can often be a struggle, especially when faced with today's constraints. But still, change happens—and it can happen faster than we expect. Looking into the past to uncover where and how change has happened will prepare participants to step out of today's constraints, and to explore what is possible.

IFTF FORESIGHT TOOLKIT

- **Get** the historical context you need to think about the future.
- **Build** a common perspective on important past events and moments when change happened.
- **Find** potential patterns of change, and explore how they may continue to shape the future.
- **Create** group awareness that major change has happened in the past, and will happen in the future.

PREPARE

# CATALOGUE SIGNALS OF CHANGE

A signal is a small or local innovation with the potential to disrupt the status quo, or scale up in size or geography. Continuously finding and cataloguing signals is a key component of researching the future.

IFTF FORESIGHT TOOLKIT

## WHY THIS TOOL?

- **Research** evidence of futures in the making and cultivate curiosity.
- **Tune observations** to early signals before they become obvious trends by focusing attention on the margins rather than the mainstream.
- **Develop** a practice of scanning the horizon for possible futures.
- **Recognize** underlying shifts and implications hidden within today's innovations and new practices.

# Provost's Task Force on Academic Matters

## Long-term Futures Group

Thinking about the long term impact of coronavirus on CMU

- 1) ...what are the biggest unknowns, worries, contingencies or critical uncertainties in our operating environment?
- 2) ...what new possibilities and avenues for our institutional success have been opened up by recent events?
- 3) ...what's the biggest provocation or change to our previous business as usual that should be considered for the longer-term?

## FORESIGHT

# ENVISION ALTERNATIVE FUTURES

While a single future cannot be predicted, alternative futures can be envisioned. Four archetypes—growth, collapse, constraint, and transformation—help us envision futures that are neither variations of a single future, nor simple mirrors of the present.

## IFTF FORESIGHT TOOLKIT

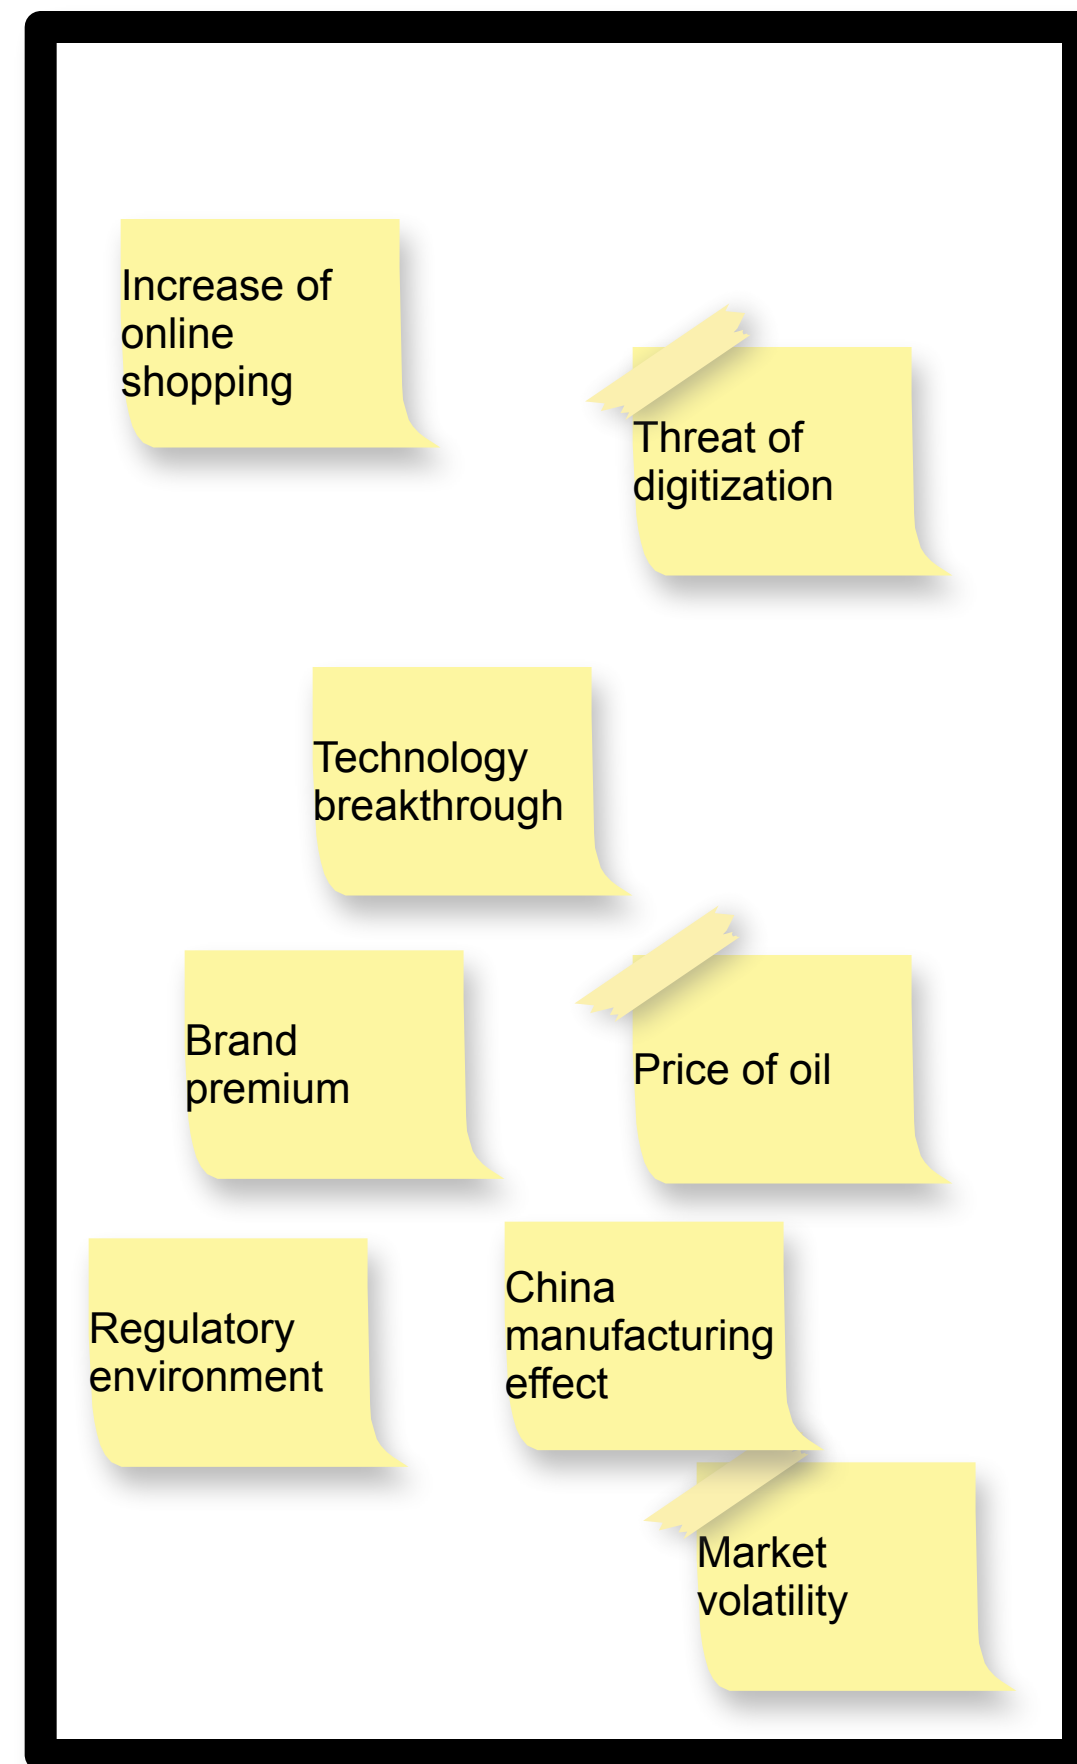

### WHY THIS TOOL?

- **Expand** the stock of available futures for you or your organization to consider.
- **Uncover** hidden assumptions, biases, and blindspots.
- **Learn** to create a robust set of scenarios that can serve as a “wind tunnel” for testing strategies under different future conditions.

# Uncertainties

## INITIAL UNCERTAINTIES

## AXES OF UNCERTAINTIES

## MOST IMPORTANT AXES OF UNCERTAINTIES

# Five fundamental uncertainties are likely to have a significant impact post-COVID-19

## Fundamental uncertainties explored

- 1 The overall **severity of the pandemic** and pattern of disease progression
- 2 The **level of collaboration** within and between countries
- 3 The **health care system** response to the crisis
- 4 The **economic consequences** of the crisis
- 5 The level of **social cohesion** in response to the crisis

## Additional uncertainties explored

### Society

- Levels of societal trust
- Psychological impacts after quarantine
- Impacts on different generations
- Long-term impacts on education

### Technology

- Attitudes toward data-sharing
- Speed of technological innovation
- Long-term effects on the workplace
- Types of new technology adopted

### Economy

- Speed of economic recovery
- Distribution of economic growth
- Impacts on inequality
- Shifts to new business models

### Environment

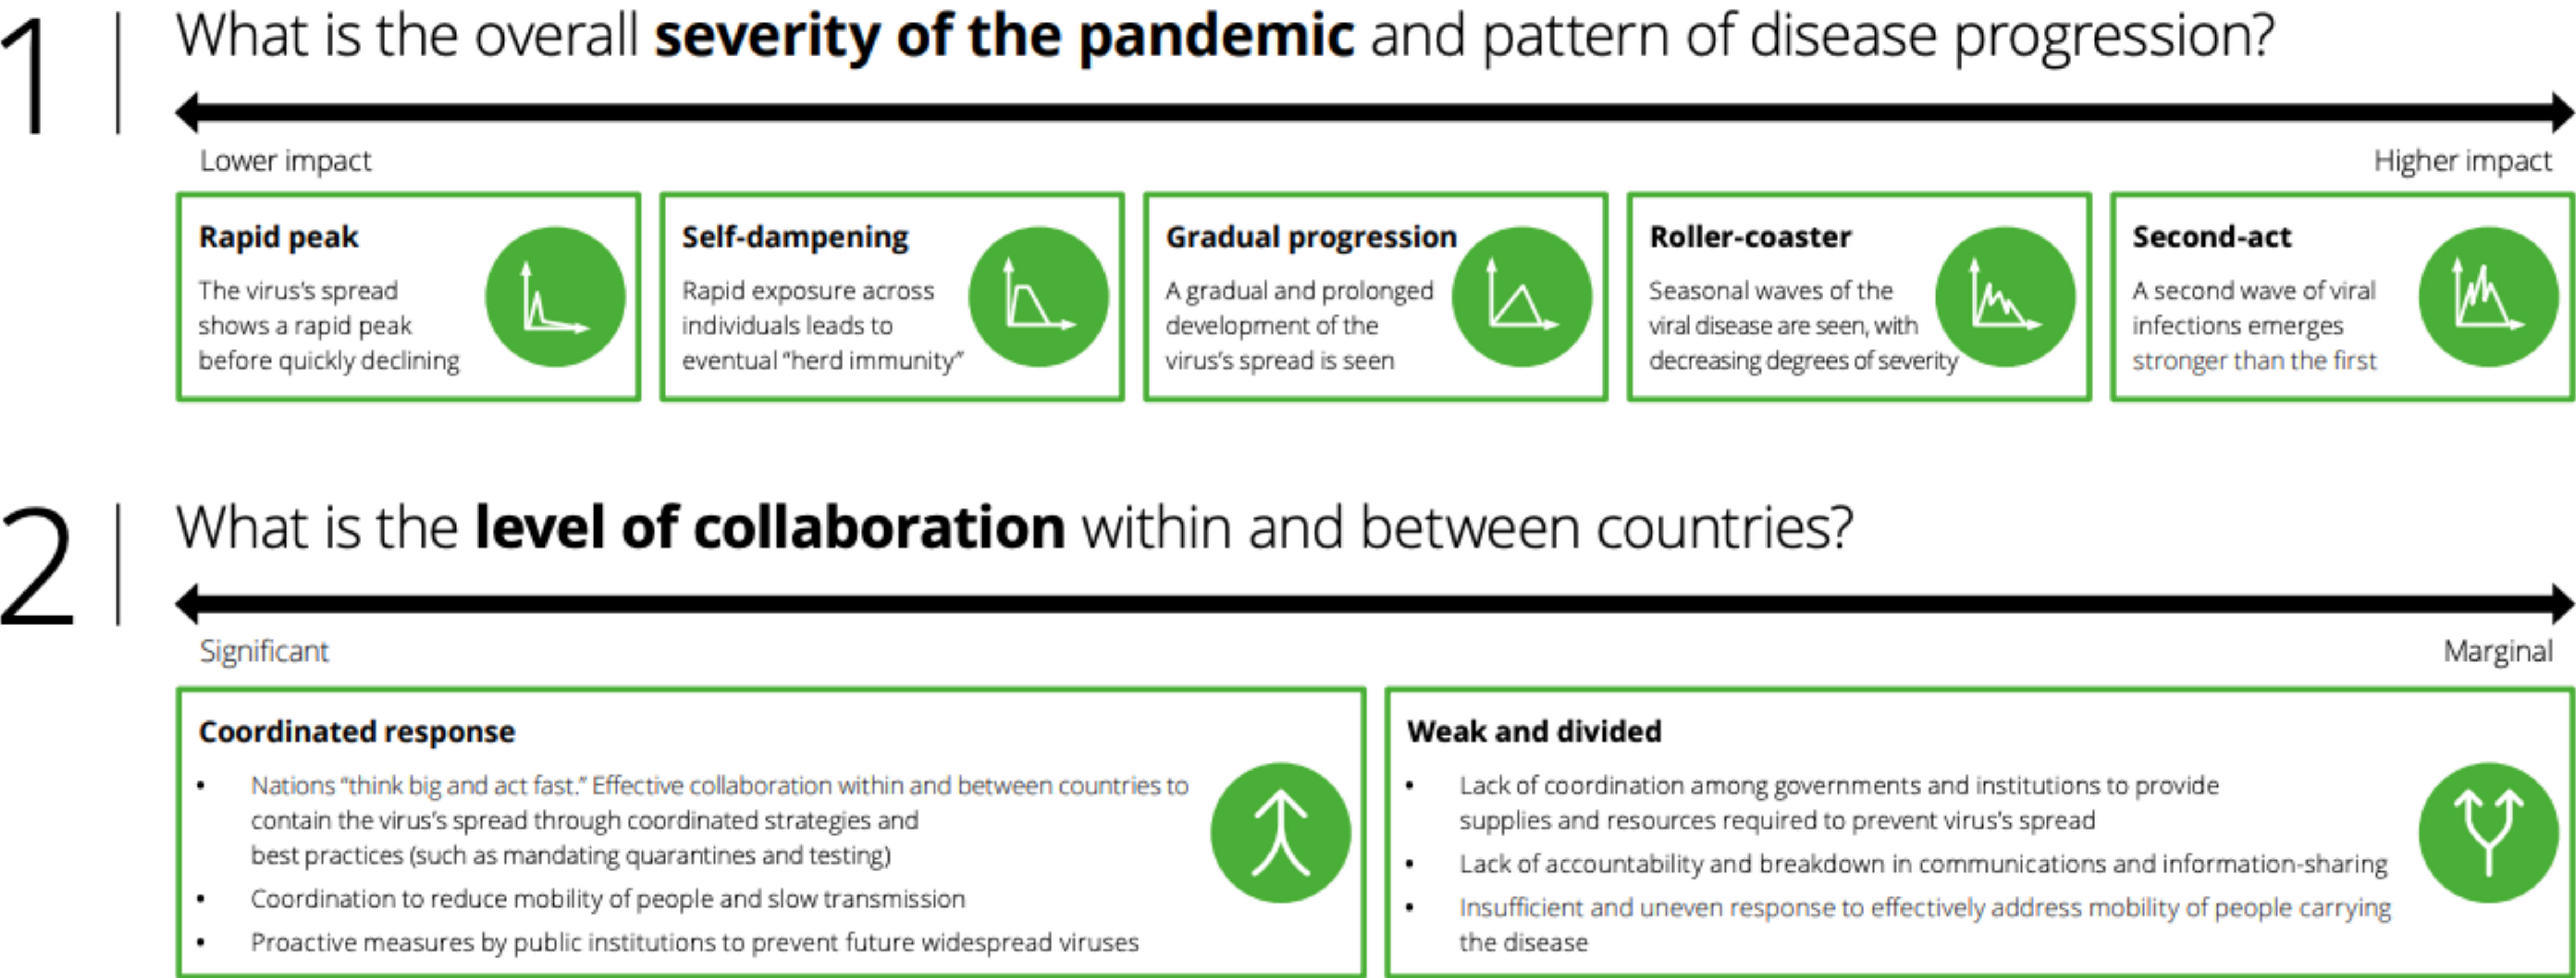

- Focus on fighting climate change
- Reduction of emissions
- Investments in renewable energy

### Politics

- Long-term impacts on governments
- Impacts on public policy and regulation
- Levels of trust in political systems
- Changes in election methodologies

# Two critical uncertainties will drive the overall impact of COVID-19

## Making sense of the future

# Four distinct scenarios emerge based on current trends and critical uncertainties

### The passing storm

The pandemic is managed due to effective responses from governments to contain the virus, but is not without lasting repercussions, which **disproportionately affect SMBs and lower- and middle-income individuals and communities.**

- Relatively constrained disease dynamic
- Effective health system and policy response

### Lone wolves

Prolonged pandemic period, spurring governments to **adopt isolationist policies**, shorten supply chains, and increase surveillance.

- Severe, rolling pandemics
- Insufficient global coordination and weak policy response

### Good company

Governments around the world struggle to handle the crisis alone, with **large companies stepping up as a key part of the solution** and an acceleration of trends toward "stakeholder capitalism."

- More prolonged pandemic
- Collaboration to control the pandemic led by large companies

### Sunrise in the east

**China and other East Asian nations** are more effective in managing the virus and take the reins as **primary powers on the world stage.**

- Severe pandemic
- Collaborative health response led by East Asian countries

# These scenarios illustrate different ways in which the world could unfold after the crisis

	The passing storm	Good company	Sunrise in the east	Lone wolves
<b>Society</b> Social cohesion...	... <b>rises</b> , with a heightened appreciation for interpersonal and familial relationships	... <b>is maintained</b> , as society shifts to become more "purpose-driven"	... <b>shifts</b> to an increased emphasis on the "good of the whole"	... <b>falls</b> , as xenophobia and suspicion of others become the norm
<b>Technology</b> Technology advances...	... <b>stay on course</b> , as previous holdouts move online	... <b>take the center stage</b> , with large companies driving solutions in areas such as health tech and biotech	... <b>are accelerated</b> , as more data-sharing allows for advances in AI and other advanced tech capabilities	... <b>are divergent</b> among different markets, with a focus on advances in surveillance and control measures
<b>Economy</b> Worldwide economies...	... <b>enter an extended recession</b> , with increased income inequality	... <b>are disrupted</b> , with a growing concentration of power among large companies	... <b>shrink</b> , due to the prolonged nature of the virus	... <b>are left in turmoil</b> , as global supply chains are disrupted
<b>Environment</b> Focus on climate change...	... <b>is renewed</b> , as global collaboration provides hope for progress	... <b>is mixed</b> , with some sustainability-minded companies investing in renewable energy	... <b>is deemphasized</b> , as economic recovery is prioritized	... <b>declines</b> , as countries shift toward energy independence
<b>Politics</b> Governments around the world...	... <b>gain trust</b> , and international organizations such as WHO grow in relevance	... <b>partner</b> with large corporations, who step up as part of the solution	... <b>look to the east</b> for guidance, as Asian countries effectively manage the virus	... <b>adopt isolationism</b> , as they attempt to contain the virus within

## The passing storm

Similar to past recessions  
Gap increases between haves and have nots  
Top institutions relatively unscathed  
Incremental change; model of h.e. somewhat unchanged

## Lone wolves

Rolling and unpredictable lockdowns makes calendar unworkable  
Few select growth areas for h.e. (/but perhaps good for CMU)  
‘Elite’ education becomes a source of protest  
Shift of h.e. online grows digital divide

Greater corporate role in h.e. - eg Facebook University  
More employer funded tuition but focussed on growth at work  
Corporate acquisition of education providers  
Shrinkage of public university sector

Decline of western h.e.  
Asian universities attract best faculty and students  
International student mobility goes to Asia  
Further erosion of public trust in the academy  
Increased focus on technology

## Good company

## Sunrise in the east

# DIGITAL SCHOLARSHIP RECONSIDERED

As businesses step into the post-coronavirus future, they need to find a balance between what worked before and what needs to happen to succeed in the next normal.

~ McKinsey & Co.

# Open Science & Data Collaborations at CMU

A University Libraries program supporting collaborative, transparent, openly accessible, and reproducible research across all disciplines at Carnegie Mellon University. We recognize that having well documented and automated research workflows, code, and datasets is essential to making research more interdisciplinary, efficient, and reusable as well as allowing researchers to leverage data science techniques. This program provides services and infrastructure for open research at CMU through digital tools, training opportunities for research tools and practices, collaboration opportunities on data science projects, special events and advocacy, and a team of experts available as research consultants and collaborators.

## **Towards a UNESCO Recommendation on Open Science**

*Building a Global Consensus on Open Science*

**“The COVID-19 pandemic raises our awareness of the importance of science, both in research and international cooperation. The present crisis also demonstrates the urgency of stepping up information sharing through open science. The time has come for us to commit all together,”**

*–UNESCO Director-General Audrey Azoulay*

## Sharing research data and findings relevant to the novel coronavirus (COVID-19) outbreak

The [outbreak of the novel coronavirus \(COVID-19\)](#) represents a significant and urgent threat to global health.

We call on researchers, journals and funders to ensure that research findings and data relevant to this outbreak are shared rapidly and openly to inform the public health response and help save lives.

We affirm the commitment to the principles set out in the 2016 [Statement on data sharing in public health emergencies](#), and will seek to ensure that the World Health Organization (WHO) has rapid access to emerging findings that could aid the global response.

Specifically, we commit to work together to help ensure:

- all peer-reviewed research publications relevant to the outbreak are made immediately open access, or freely available at least for the duration of the outbreak
- research findings relevant to the outbreak are shared immediately with the WHO upon journal submission, by the journal and with author knowledge
- research findings are made available via preprint servers before journal publication, or via platforms that make papers openly accessible before peer review, with clear statements regarding the availability of underlying data
- researchers share interim and final research data relating to the outbreak, together with protocols and standards used to collect the data, as rapidly and widely as possible - including with public health and research communities and the WHO
- authors are clear that data or preprints shared ahead of submission will not pre-empt its publication in these journals

## Public Health Emergency COVID-19 Initiative

Transmission electron micrograph of SARS-CoV-2 virus particles, isolated from a patient. Image captured and color-enhanced at the NIAID Integrated Research Facility (IRF) in Fort Detrick, Maryland.  
*NIAID*

On March 13, 2020, the National Science and Technology Advisors from a dozen countries, including the United States, called on publishers to voluntarily make their COVID-19 and coronavirus-related publications, and the available data supporting them, immediately accessible in PubMed Central (PMC) and other appropriate public repositories to support the ongoing public health emergency response efforts.

To date, more than fifty publishers (see [Collaborators](#) to the right) have responded to the call and volunteered to make their coronavirus-related articles accessible in PMC in formats and under license terms that facilitate text mining and secondary analysis. In addition, many other PMC journals and publishers make their coronavirus-related articles available the same way.

See the [COVID-19 Initiative FAQ](#) for more information, including details on scope and publisher eligibility.

### Coronavirus-Related and COVID-19-Related Articles in PMC

Queries in PMC to find full-text journal articles relating to

- [COVID-19 \(all\)](#)  
[Open Access only](#) | [Author Manuscripts only](#)
- [Coronaviruses broadly \(historical and current literature\) \(all\)](#)  
[Open Access only](#) | [Author Manuscripts only](#)

You can append your own custom queries with "open access"[filter] or "author manuscript"[filter] as we have done to the queries above to identify articles that are currently available in [PMC Text Mining Collections](#).

NLM encourages customization of the search queries suggested in the right-hand navigation bar to meet your specific research or information needs.

[Datasets](#)

## Literature Review

Using publications from the **CORD-19 dataset** (Last updated: 2020-06-08)

Covers **5.8%** of the studies published since February 1 (1164 of the 20122 papers)

[FEEDBACK](#)

### About This Review

These findings have been extracted from the CORD-19 papers by machine learning algorithms with a human curation overlay (process described in [this thread](#)). The results and quotes on this page should not be relied on without reading and assessing the validity of the underlying research. If you see a conclusion that is misrepresented, please use the [feedback section](#) of this page to report it.

This project is a part of the White House Office of Science and Technology Policy's [call to action](#) for the technology community and addresses research priorities defined by the National Academies and the World Health Organization.

This review can be useful for those wanting a quick overview of what the latest literature is saying on the topics we cover. It might also help those writing local guides, expert opinions or systematic reviews. Click on the topic in the table of contents below to see the results table for that topic.

## Key Scientific Questions about COVID-19

About

Network of science

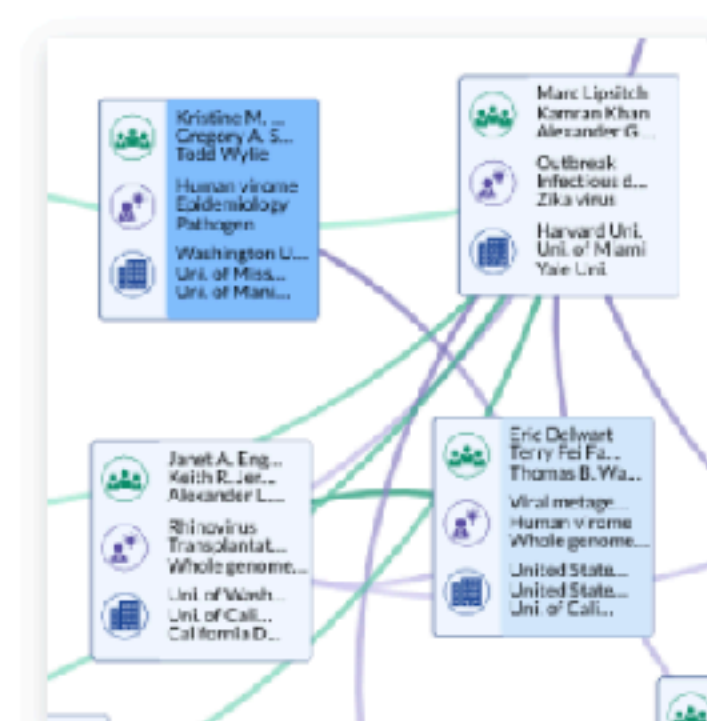

Faceted search

Proteins/genes/cells

Diseases/chemicals

SciSight is a tool for exploring the evolving network of science in the **COVID-19 Open Research Dataset**, from [Semantic Scholar](#) at the [Allen Institute for AI](#).

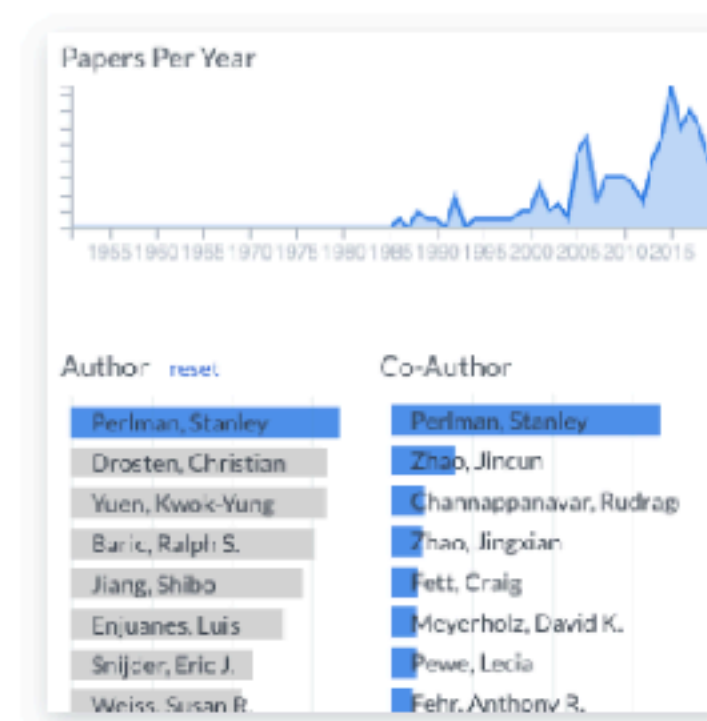

Our goal is to help accelerate scientific research, with tools to visualize the emerging literature network around COVID-19. Use our exploratory search tools to find out what groups are working on what directions, see how biomedical concepts interact and evolve over time, and discover new connections.

### Network of science

Explore the progress being made against COVID-19, with a visualization of research groups and their ties.

[Explore Network](#) →

### Faceted paper search

See how authors and topics interact over time with this exploratory faceted search tool.

[Explore Facets](#) →

### Co-mentions of proteins/genes/cells

Explore associations between proteins/genes/cells concepts appearing in the dataset.

## COVID-19 Antibody Seroprevalence in Santa Clara County, California

### Abstract

**Background** Addressing COVID-19 is a pressing health and social concern. To date, many epidemic projections and policies addressing COVID-19 have been designed without seroprevalence data to inform epidemic parameters. We measured the seroprevalence of antibodies to SARS-CoV-2 in a community sample drawn from Santa Clara County. **Methods** On April 3-4, 2020, we tested county residents for antibodies to SARS-CoV-2 using a lateral flow immunoassay. Participants were recruited using Facebook ads targeting a sample of individuals living within the county by demographic and geographic characteristics. We estimate weights to adjust our sample to match the zip code, sex, and race/ethnicity distribution within the county. We report both the weighted and unweighted prevalence of antibodies to SARS-CoV-2. We also adjust for test performance characteristics by combining data from 16 independent samples obtained from manufacturer's data, regulatory submissions, and independent evaluations: 13 samples for specificity (3,324 specimens) and 3 samples for sensitivity (157 specimens). **Results** The raw prevalence of antibodies to SARS-CoV-2 in our sample was 1.5% (exact binomial 95CI 1.1-2.0%). Test performance specificity in our data was 99.5% (95CI 99.2-99.7%) and sensitivity was 82.8% (95CI 76.0-88.4%). The unweighted prevalence adjusted for test performance characteristics was 1.2% (95CI 0.7-1.8%). After weighting for population demographics of Santa Clara County, the prevalence was 2.8% (95CI 1.3-4.7%), using bootstrap to estimate confidence bounds. These prevalence point estimates imply that 54,000 (95CI 25,000 to 91,000 using weighted prevalence; 23,000 with 95CI 14,000-35,000 using unweighted prevalence) people were infected in Santa Clara County by early April, many more than the approximately 1,000 confirmed cases at the time of the survey. **Conclusions** The estimated population prevalence of SARS-CoV-2 antibodies in Santa Clara County

# 'Truly Sorry': Scientists Pull Panned Lancet Study of Trump-Touted Drug

By Reuters

June 5, 2020

NEW YORK/LONDON — An influential study that found hydroxychloroquine increased the risk of death in COVID-19 patients has been withdrawn a week after it led to major trials being halted, adding to confusion about a malaria drug championed by U.S. President Donald Trump.

The Lancet medical journal pulled the study after three of its authors retracted it, citing concerns about the quality and veracity of data in it. The World Health Organization (WHO) will resume its hydroxychloroquine trials after pausing them in the wake of the study. Dozens of other trials have resumed or are in process.

The three authors said Surgisphere, the company that provided the data, would not transfer the dataset for an independent review and they "can no longer vouch for the veracity of the primary data sources."

The fourth author of the study, Dr. Sapan Desai, chief executive of Surgisphere, declined to comment on the retraction.

## Request for Information: Public Access to Peer-Reviewed Scholarly Publications, Data and Code Resulting From Federally Funded Research

A Notice by the [Science and Technology Policy Office](#) on 03/31/2020

### PUBLISHED DOCUMENT

#### AGENCY:

Office of Science and Technology Policy (OSTP).

#### ACTION:

Notice of Request for Information (RFI), extension of comment period.

#### SUMMARY:

OSTP, and the National Science and Technology Council's (NSTC) Subcommittee on Open Science (SOS), are engaged in ongoing efforts to facilitate implementation and compliance with the 2013 memorandum *Increasing Access to the Results of Federally Funded Scientific Research* and to address recommended actions made by the Government Accountability Office in a November 2019 report. OSTP and the SOS continue to explore opportunities to increase access to unclassified published research, digital scientific data, and code supported by the U.S. Government. This RFI aims to provide all interested individuals and organizations with the opportunity to provide recommendations

## Supporting Music Teaching and Learning During COVID-19

I was curious how our e-resources would support music teaching and learning when classes moved online. While the circumstances we are in right now are not ideal, they have forced me to look at how I use online resources differently and if they really are meeting needs of the School of Music.

[Dr. Alexa Woloshyn](#), assistant professor of Musicology, sent me about twelve topics students were researching in her Music History III course so I could put our resources to the test. I spent time on each one and was able to find a good selection of online books and full-text journal articles for all of them.

My go-to music research databases are the [library catalog](#), [Worldcat](#), [Grove Music Online](#), [Music Index](#), [HILM Music Abstracts](#), [JSTOR](#), and [ProQuest](#). In the past I would have bypassed the Everything tab on our library home page and gone straight for the Books & More option, but I found myself relying heavily on the Everything search for results (something students were already doing) since losing access to the print collection.
